

ABSTRACT

This report describes the results of an identification-level architectural resource survey and determination of National Register of Historic Places (NRHP) eligibility conducted for the Church Road (Wynnefield to State Route [S.R.] 71) Improvements project in New Castle County, Delaware for the State of Delaware Department of Transportation (DelDOT). The goal of the survey was to identify each resource within the Area of Potential Effect (APE) built prior to 1960 and assess its eligibility for listing using the NRHP Criteria For Evaluation.

The survey and determination of eligibility report identified 18 historic resources within the project APE. None is recommended as eligible for NRHP-listing. The majority of resources (n=12 of 18) within the APE were constructed in the post-World War II era and are undistinguished examples of houses with elements of the Cape Cod, Ranch, or Colonial Revival styles. Three resources constructed in the nineteenth century have been altered.

A summary of each resource and an evaluation of its eligibility is included in Sections 4.2 and 4.3 of this report. Resumes of the Principal Investigator and report authors are included in an appendix.
